STEAM OVEN COOKBOOK

TOSHIBA

Tips for steaming dishes

Tips for keeping dishes nutritious

- [Choose fresh ingredients]** The ingredients should be tender and juicy because it's not easy either for the proteins in them to dissolve in water or for the seasonings to penetrate into the ingredients during the steaming process.
- [Arrange the dishes in layers]** Do arrange the dishes in layers. Dishes with less soup, pastel and hard-to-cook dishes go to the upper layer while dishes with more soup, dark and easy-to-cook ones should be placed in the bottom layer.

Tips for keeping dishes delicious

- [Heat]** Generally, egg custard and double-layer milk custard can be steamed by using (???) Steam function with 95 degrees. This can avoid the honeycomb state and get a fresh and smooth taste. For shaped dishes, can use the same method to prevent from ruining the shape.
- [Time]** It takes longer to steam large-bodied ingredients, while small pieces or flakes take less time..

Instructions on baking mode

Taste Reminder

Reminder of the principle and method of steaming and cooking

When cooking, use steaming to heat without a cover. The water box should be filled with water before using. When opening, please be careful of the abundant steam generated in the cooking

| Steaming mode | Applicable type |
|---|---|
|  Steam | Suitable for meat (such as ribs, chicken), steamed eggs, buns and other homemade dishes |
|  High Temp. Steam | Suitable for fish, seafood (shrimp, shellfish, crab, etc.), vegetables, frozen food |
|  Stew | Suitable for stew, stew, slow cooking |

Reminder of the principle and method of baking heating

Use hot air convect and heater to heat. After preheating, please shorten the time to open the door as far as possible to maintain the temperature in the furnace. After cooking, please take it out immediately so as not to darken the food.

Time adjustment description

Cooking methods are closely related to food characteristics. The program of the local automatic menu is best matched with the amount and time of the ingredients given. Please follow the recommendations.

The time of the steam automatic menu can be fine-tuned according to individual preferences. Take meat recipes as an example, if you increase the time, the taste will be tougher; if you spend less time, the taste will be tenderer.

After the mode starts running, turn to the left () to decrease the time, and turn to the right () to increase the time.

Capacity table for ingredients used in this book

1 Table Spoon = 15cc = 2 bottle caps

1 Tea Spoon = 5cc = 1 bottle cap

1/2 Tea Spoon = 2.5cc = 1/2 bottle cap

1/4 Tea Spoon = 1.2cc = 2 drops

* If you don't have a good grasp of the weight, please don't give too much. For the size of the bottle cap, please refer to the ordinary 550ml water bottle cap.

Tips

How to whisk egg white

STEP 1

Put the egg whites in a clean beating bowl, add 1/3 fine granulated sugar, and beat the egg white at a low speed with an electric beater until the egg white is in a coarse foamy state.

STEP 2

Add the remaining 1 beat 2 fine granulated sugar and beat the egg beater at medium and low speed until the egg whites are fine foam-like bubbles.

STEP 3

Add the remaining fine granulated sugar, beat the egg beater at high speed until the egg whites show lines that are not easy to disappear, and lift the egg head to show a large corner, which is called wet foaming.

STEP 4

The electric egg beater turns to medium speed and continues to beat until the egg white cream has an obvious sense of resistance. Lift the egg whites, and the egg whites show upright small sharp corners. This stage is called dry foaming.

How to whisk the butter

- STEP 1** Cut the butter into small pieces or slices and soften it to ointment in an environment of about 25 °C (room temperature). Gently press with your finger to leave a mark, which is the most suitable condition.
- STEP 2** Use an electric egg beater to whisk the butter slightly at a low speed until the color becomes lighter.
- STEP 3** Add fine sugar or powdered sugar, beat the butter and sugar with an electric egg beater at low speed and beat at medium speed; the butter will become lighter in color and larger in volume.
- STEP 4** When the size of the butter paste becomes larger and lines appear, turn the electric egg beater to a high speed, and finish it when the butter is light and fluffy and the color is white.

Fermentation skill of yoghurt

[Milk selection]

Use pure milk, normal temperature milk or pasteurized milk. Adding some milk powder will make the texture of yogurt more mellow.

[Fermenter selection]

It is recommended to use lactic acid bacteria powder, which is easy to operate, stable and mild in taste. You can also introduce or use Kefir granules with finished yogurt according to your personal preference.

[Container disinfection]

The bacteria in the container may affect the quality of yogurt, so be sure to do a good job of disinfection and sterilization. The easiest way is to scald it with boiling water.

[Refrigerated taste]

Put the yogurt in the refrigerator for more than 8 hours, and the yogurt will become thicker and more fragrant.

[Adjust acidity]

If you think the home-brewed yogurt is too sour, you can choose low acidity bacterial powder, or under the premise of yogurt solidification, shorten the fermentation time and eat it as soon as possible. It is also a good idea to add honey, jam or cereal before eating.

Ingredients

Plain yogurt 200g

Milk 200g

Practice

- 1 Mix plain yogurt and milk in a large bowl
- 2 Place the bowl on the baking pan; put the pan in the lower layer of the oven. Close the oven door.
- 3 Select Fermentation. function; set the time to 8 hours and start.
- 4 Enjoy healthy home-made yogurt when it is finished.

Fermentation skills of dough

[Yeast]

In a suitable range, the more yeast is used, the faster the fermentation speed is; on the contrary, the opposite is true. The yeast stored improperly or stored for too long has dark color, low fermentation power and slow fermentation speed.

[Water temperature]

If you make a dough at room temperature with warm water at 40 °C and flour, the temperature of the dough will be 27 °C, which is the most suitable for yeast multiplication. If the water temperature is too high, the yeast can be easily killed by the hot water. If the water temperature is too low, the yeast multiplies too slowly.

[Salt and sugar]

Generally speaking, adding 2 ~ 3g of salt to 500g of flour is beneficial to the growth and development of yeast. The use of sugar, which accounts for about 5% of the dough, can provide nutrition for yeast reproduction and speed up yeast reproduction. But be careful not to use too much sugar and salt.

[Temperature]

The general requirement is 28 °C ~ 30 °C, which can be adjusted by increasing or decreasing the water temperature used for mixing noodles. When the room temperature is about 20 °C in spring, the water temperature can be controlled at 35 °C ~ 40 °C. When the room temperature is above 30 °C in summer, the water temperature can be controlled at 13 °C ~ 15 °C.

[Sign of dough fermentation maturity]

The top of the dough bulges and feels dry. The dough is naturally elongated by hand, then slowly retracted after letting go. At this time, the dough is full of pores and gives off the aroma of wine.

蒸气焗炉食谱

蒸菜小技巧

营养技巧

- 【食材要新鲜】因蒸制时原料中的蛋白质不易溶解于水，调味品也不易渗透到原料中，故食材质地要嫩、多汁。
- 【注意分层摆放】蒸菜时，还要注意分层摆放，汤水少的才放在上面，汤水多的菜放在下面淡色菜放在上面，深色菜放在下面，不易熟的菜放在上面易熟的菜放在下面。

美味技巧

- 【火候】蒸蛋、双皮奶用95度[🌀 原味纯蒸]功能，能避免出现蜂窝状的情况，获得鲜嫩滑爽的口感。造型类的菜式，为保持造型，亦可参考此做法。
- 【时间】体积大的食材蒸的时间比较长，小块或者片状食材时间短。

烘烤模式说明

热风对流 · 适用于烘焙色泽金黄的食物。如肉类、炸物、烘焙蛋糕、面包等

上管热风 · 适合烤蔬菜、汉堡肉等少而薄的食物

上管烧烤 · 适合少分量烹饪或局部上色

蒸气烤焗 · 适用于需锁住食物内部水分，外脆内多汁的食物。如蔬菜、面包蛋糕、肉类。

滋味提醒

蒸气加热原理和方法提醒

烹调时以蒸气加热，一般无需加盖。每次使用前，应将水箱加满水。开门时请小心烹饪中产生的充沛蒸气烫手。

| 蒸气模式 | 适用类型 |
|--|---------------------------|
|  原味纯蒸 | 适用于肉类(如排骨、鸡肉)、蒸蛋、包点等家常菜 |
|  高温蒸气 | 适用于鱼类、海鲜（虾、贝类、蟹等）、蔬菜、急冻食物 |
|  营养慢炖 | 适用于炖品、炖肉、慢煮 |

烘焗加热原理和方法提醒

利用热风对流和发热器加热，预热完成后，请尽量缩短中途开门时间，以保持炉内温度。烹饪完成后，请立刻取出以免食物烤色变深。

时间调整说明

烹调方法和食物特性密切相关，本机自动菜单的程序与所给食材份量、时间为最佳匹配，请按建议操作。

蒸气类自动菜单的时间可依个人喜好进行微调，以肉类食谱为例，增加时间，口感更韧；减少时间，口感更嫩。

程序开始运行后，向左转动()减少时间,向右转动()则增加时间。

本书中所用配料所需的容量对照表

1 汤匙(1 Table Spoon) = 15cc = 2 个小樽盖

1 茶匙(1 Tea Spoon) = 5cc = 1 个小樽盖

½ 茶匙(½ Tea Spoon) = 2.5cc = ½ 小樽盖

¼ 茶匙(¼ Tea Spoon) = 1.2cc = 2 滴

* 如果对份量把握不好，建议宁少勿多。小瓶盖大小参考普通550ml 纯净水瓶盖。

小知识

如何打发蛋白

步骤1

将蛋白置于干净的打蛋盆中，加入1/3细砂糖，用电动打蛋器低速打至蛋白呈粗泡状态；

步骤2

加入剩余的1/2细砂糖，打蛋器转中低速打至蛋白呈细密的乳沫状泡泡；

步骤3

加入剩余的细砂糖，打蛋器转高速打至蛋白出现轻易不易消失的纹路，提起打蛋头呈现大弯角，这阶段称为湿性发泡；

步骤4

电动打蛋器转中速继续打发，打至蛋白霜有明显阻力感，提起打蛋头，蛋白霜呈直立小尖角，这阶段称为干性发泡。

如何打发牛油

步骤1 将牛油切成小块或片状，放在25℃左右的环境中（室温）中软化至软膏状，用手指轻轻一按可留下痕迹，这个状态最适合打发；

步骤2 用电动打蛋器以低速把牛油稍微打发，至颜色变浅一些；

步骤3 加入细砂糖或者糖粉，用电动打蛋器低速把牛油和糖打匀，转中速打发；牛油会颜色变浅、体积变大；

步骤4 当牛油浆体积变大、出现纹路的时候，把电动打蛋器转高速打发，当牛油呈现轻盈蓬松状、颜色发白即完成打发。

奶酪发酵技巧

[牛奶选择]

选用纯牛奶，常温奶或巴氏杀菌奶均可，加一些奶粉会让奶酪的质感更加醇厚。

[发酵剂选择]

推荐使用乳酸菌粉，操作方便，出品稳定，做出的奶酪味道温和。也可以根据个人喜好用奶酪制成品代替或使用开菲尔菌粒。

[容器消毒]

容器内的细菌可能会影响奶酪的质量，所以一定要小心进行消毒杀菌工作，最简便的做法是用开水烫一下。

[冷藏调口感]

将预备好的奶酪放入雪柜冷藏8小时以上，奶酪会变得更加浓厚，香味也会更丰富。

[调酸度]

如果觉得自酿的奶酪太酸，可以选择低酸度菌粉，或者在奶酪凝固的前提下，缩短发酵时间，并尽快食用。食用之前加入蜂蜜、果酱或麦片也是个不错的方法。

食材

原味奶酪——— 200g

纯牛奶——— 200g

做法

- 1 将奶酪和纯牛奶装入大碗中，混合均匀；
- 2 将碗放入烤盘中，烤架至于蒸气焗炉下层，关上炉门；
- 3 选择 低温发酵功能，设定8小时，启动；
- 4 烹饪结束后取出食用

面团发酵技巧

[酵母]

在合适的范围内，酵母用量越多，发酵速度越快；反之，则相反。保管不当或贮藏时间过长的酵母，色泽较深、发酵力低、发酵速度慢。

[水温]

在常温下采用40℃左右的温水和面，制成的面团温度为27℃左右，此温度最适宜酵母繁殖。水温过高，酵母易被烫死；水温过低，酵母繁殖较慢。

[盐和糖]

一般来说，500g面粉添加2~3g食盐，对酵母生长发育有利。使用占面团5%左右的糖，可以为酵母繁殖提供营养，使酵母繁殖速度加快。但要注意，糖和盐的使用都不要过量。

[温度]

一般要求为28℃~30℃，可以通过提高或降低和面用的水温来调节。春天室温在20℃左右时，水温可控制在35℃~40℃。夏季室温在30℃以上时，水温可控制在13℃~15℃。

[面团发酵成熟的标志]

面团顶部鼓起，摸上去很干燥。用手提，面团很自然地被拉长，松手后慢慢回缩。此时面团内部多气孔，并散发出酒香味。
